Konteiner

Dokumendliik, mille kohta ei ole vastavat skeemi loodud või ta ei vasta ühegi loodud õigusakti dokumendliliigi struktuurile kasutatakse tema loomiseks konteinermalli skeemi. Konteiner malli kasutamisel saab dokumendiliigile lisada kõiki metaandmeid, mida õigusakti juurskeem sisaldab.

NB! Konteinerskeem on võetud kasutusele ajutise lahendusena (vanade andmete migreerimine ja üleminekuperioodil dokumendiliikide tarbeks, millele pole vastavat skeemi loodud).

<u>Välisministeeriumi teadaanne</u> väljakuva konteiner_1_08.09.2010.xsd skeemi alusel koostatud XMLile, millele rakendub XSL laadileht.

Välisministeeriumi teadaanne (algtekst) xml koodina.

Koodis on eraldatud taustavärviga struktuuri ülesehitus, mis koosneb järgmistest osadest

- 1) viide nimeruumile ja skeemi asukohale, millist skeemi kasutatakse (element oigusakt)
- 2) õigusakti metaandmete blokk (element **metaandmed**)
- 3) õigusakti sisu (element sisu ja tema kooseisus olev element HTMLKonteiner)

Dokumendiliikide seadus, määrus, üksikakt muutmisaktid

Dokumendliikide muutmisskeemid erinevad oma kasutuselt vaid selles osas, et neis on kasutusel vähem elemente. Kasutusel olevate elementide väljakuvas erisisu ei ole.

Muutmisseadus väljakuva näide:

Pühade ja tähtpäevade seaduse ning Eesti lipu seaduse muutmise seadus
